

Advanced Allografts

Ability Network International, in partnership with Advanced Solution, carry over a dozen top allografts designed to treat chronic wounds. We service providers nationwide.

Clinical Use

Human body has the innate power to regenerate itself. However, this ability can be stunted or even stalled by age, biological factors or chronic disease states. Our focus is on placental derived tissue products and related services which support the repair, reconstruction, or replacement of the patient's own tissue.

Service & Support

Our experienced team supports you throughout the IVR/Pre-Auth, ordering, shipping & handling process. We monitor product development and regulatory compliance announcements related to skin-substitute and advise providers of important changes and updates.
